A Message from the Program Director:

The Water Protection Program of the Missouri Department of Natural Resources has an important mission to ensure safe drinking water to every visitor and resident of Missouri by regulating public water systems. The purpose of this report is to let readers know how water systems in Missouri are performing. The report is the ninth Annual Compliance Report and covers calendar year 2004. The program is providing the report to the U.S. Environmental Protection Agency (EPA) for inclusion in a national report summarizing the performance of the nation's drinking water supplies.

In 1974, Congress passed the Safe Drinking Water Act, the first national legislation regulating drinking water. Under this law, states may seek primacy, or approval from EPA to administer a Public Water System Supervision Program. To receive primacy, states must meet certain requirements laid out in the Safe Drinking Water Act, including adoption of drinking water regulations at least as stringent as federal regulations and demonstration that the state can enforce the requirements. EPA granted primacy to the State of Missouri in 1979.

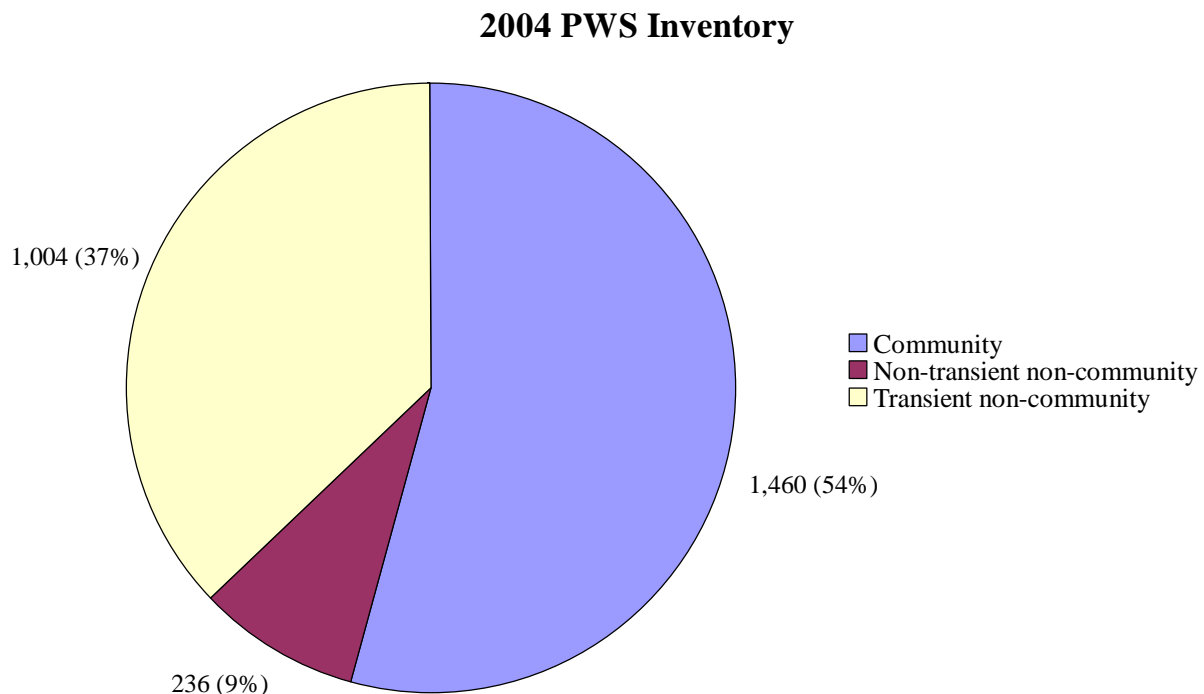

The program developed this report not only to comply with statutory obligations mandated by the Safe Drinking Water Act, but also to focus attention and provide an understanding of the importance of quality drinking water.

Edward Galbraith, Director
Water Protection Program
Missouri Department of Natural Resources

The Missouri Public Water System Universe in 2004

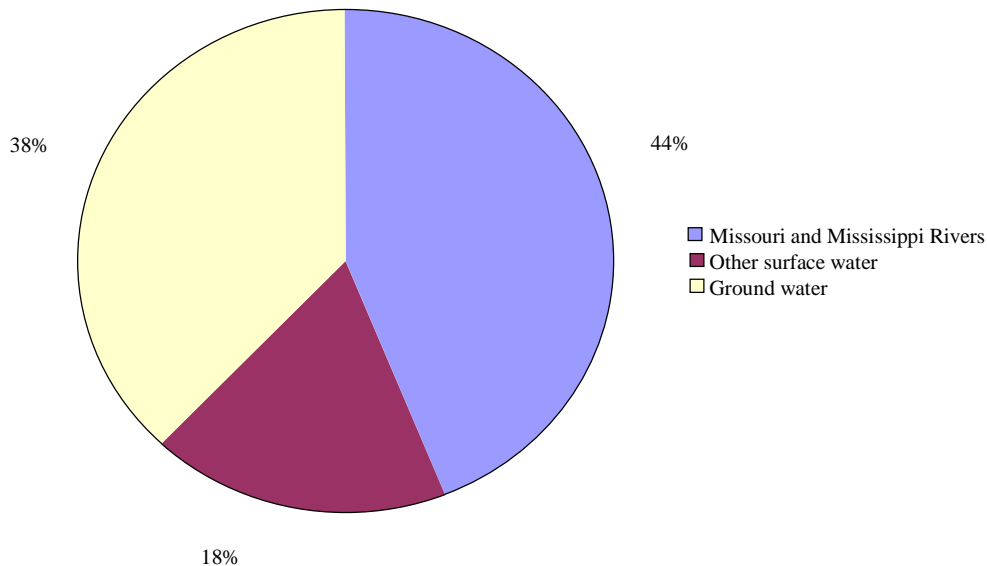

A Public Water System (PWS) is defined as a system that provides water through piping or other constructed conveyances for human consumption to at least 15 service connections or serves an average of at least 25 people for at least 60 days each year. Water testing at systems serving fewer people than this is facilitated by local and county sanitarians and the Missouri Department of Health and Human Services, rather than the Department of Natural Resources.

There are three types of PWSs: community, non-transient non-community and transient non-community. Examples of community systems include towns, water districts, subdivisions, mobile home parks and residential facilities such as nursing homes or prisons. Non-transient non-community systems serve the same people every day, but not in a residential setting; schools and factories are good examples. Transient non-community systems serve different people daily, such as restaurants, resorts and rest stops. These smaller systems are typically in rural areas where it is not feasible to hook up to a city or water district. The requirements for construction, operation, monitoring, etc., vary among systems based on their type, size, and source of water.

In 2004 there were 2,700 active PWSs in Missouri. Of this total, 1,460 were community, 236 were non-transient non-community and 1,004 were transient non-community systems.

Source of Water (Percent Population Served)

The community water systems in Missouri served over 4.9 million citizens in 2004. These citizens benefit from one of Missouri's most outstanding resources: its water. There is generally a large quantity of good quality water in Missouri. By far the largest source of drinking water for Missourians is the Missouri and Mississippi River system. The abundant supply of water in these rivers and the proximity to the state's major population centers make the use of the big rivers as a source so popular. Groundwater is the next most used source of drinking water for Missouri's community supplies. This is especially true in southern Missouri where good quality groundwater is easy to obtain and requires very little treatment to be used for drinking water.

Analysis of Compliance by Public Water Systems in 2004

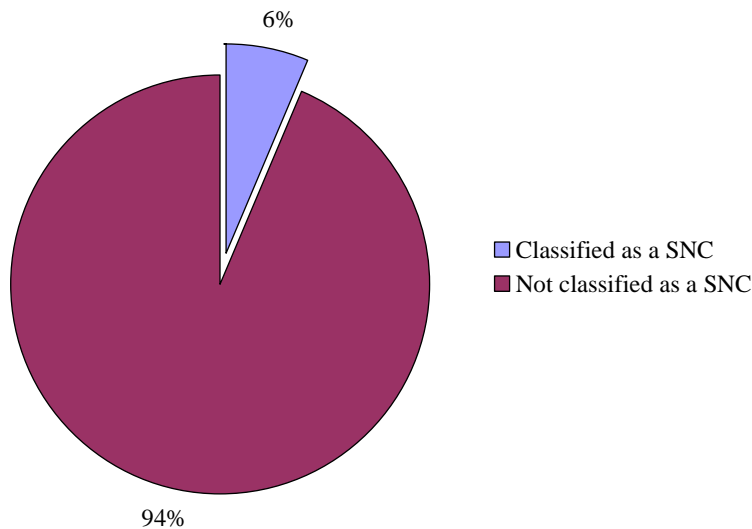

We expect a lot from our public water systems and require testing for more than 90 different regulated chemicals and microbiological contaminants during the year. A system is to be applauded for performing all required testing and meeting all maximum contaminant level (MCL) standards. When MCL violations do occur, that often is the first identification of a problem and can be the first step toward correcting it. Many public water systems perform testing beyond that required by the state.

The Summary of Violations tables are counts of individual violations. Appendices A through D list specific systems in order of their county of location. Because there are multiple regulations involved and some monitoring is on a monthly schedule, each PWS has the potential to accumulate multiple violations during the year. For example, the monitoring requirements for the Total Coliform Rule alone create a potential for over 32,000 violations. This puts some perspective on the violation figures shown in the tables. Another factor is the number of systems that have violations. Many of the violations are from water systems with problems that result in multiple violations during

the year, while other systems may only have one or two violations. The department uses various methods to focus on the water systems that need attention.

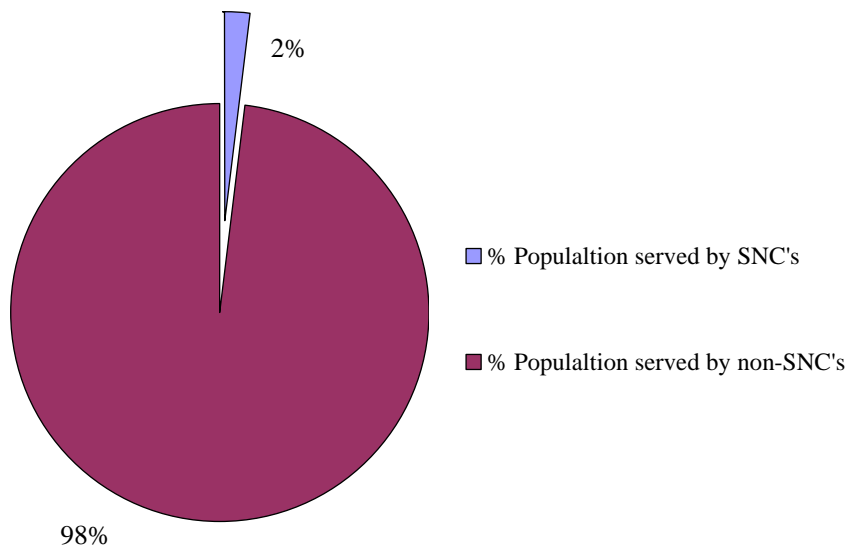

The Missouri Department of Natural Resources and the U.S. Environmental Protection Agency (EPA) use a process called Significant Non-Compliers (SNCs) to focus attention on the water systems with problems that are considered significant. These are the systems with serious violations that potentially affect public health or with multiple monitoring violations. Appendix D gives the list of Significant Non-Compliers. Some of the systems listed, however, may have already resolved these problems.

Significant Non-Compliers for 2004

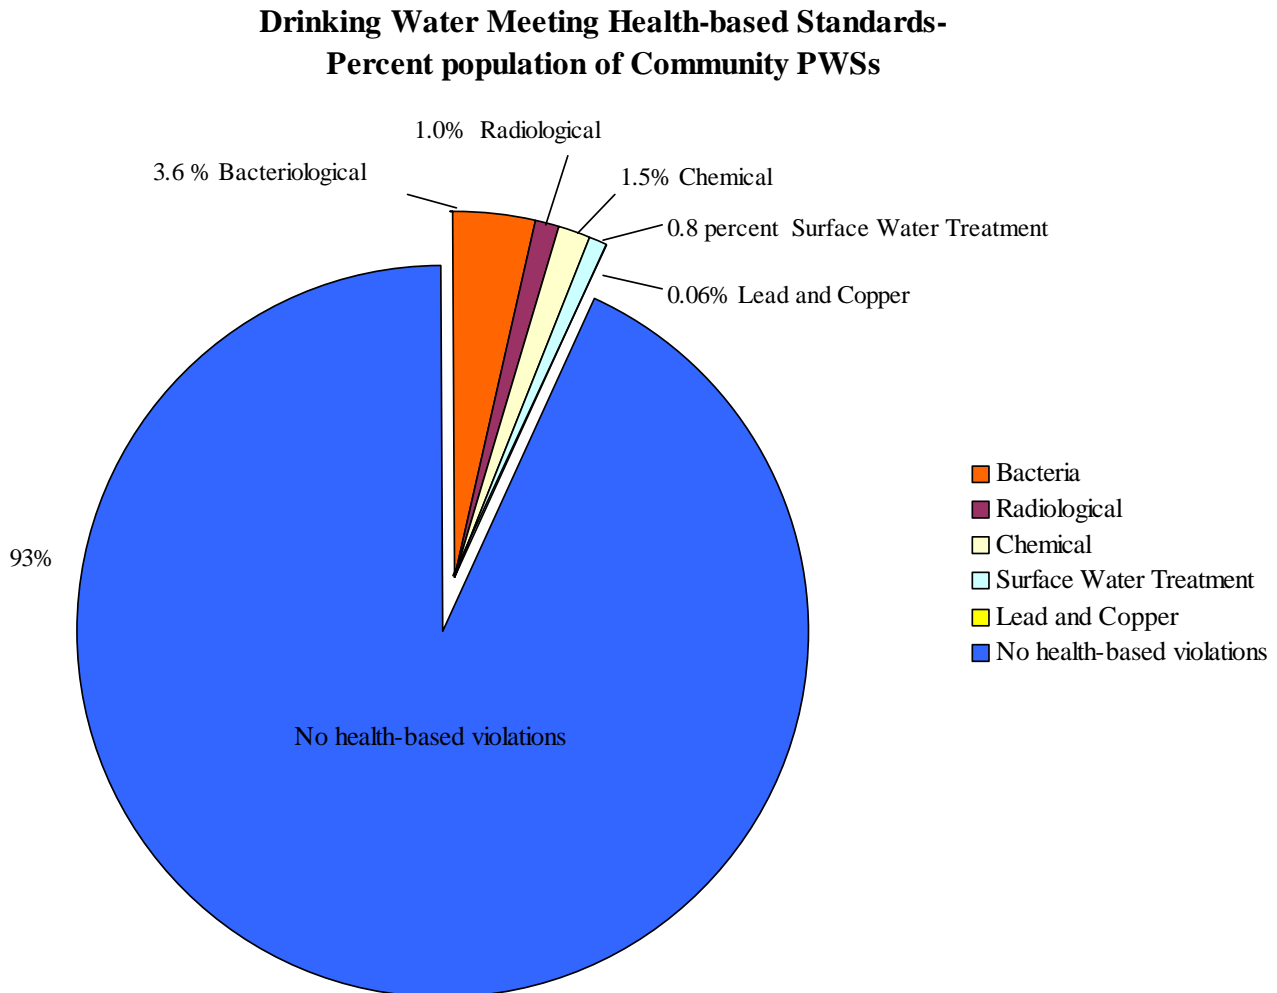

During 2004 there were only 170 systems on the SNC list. That means that 2,530 of the 2,700 PWSs in Missouri were not significant violators. Those systems listed typically serve a small population.

Percent Population Served by SNC Water Systems

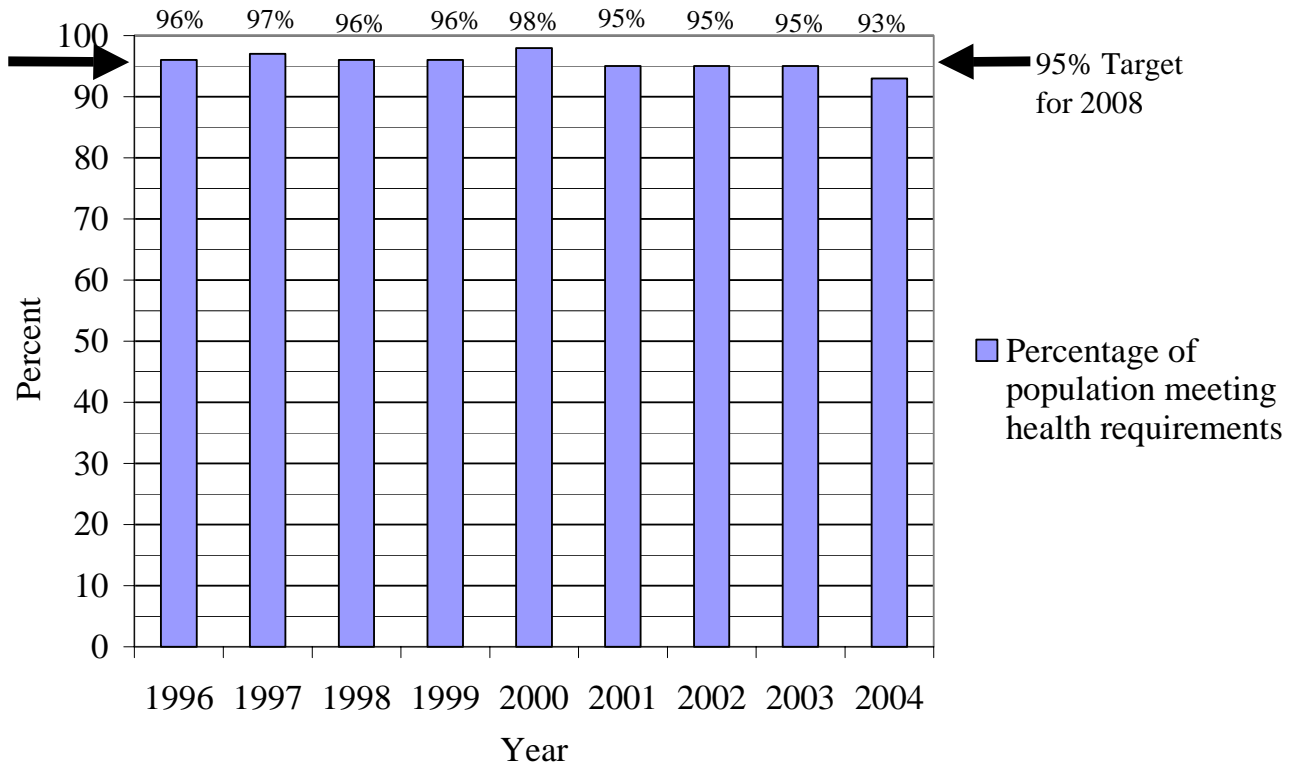

Maximum contaminant level and treatment technique violations represent the most significant impact on the public health. These occurred at a small number of public water systems serving less than 10 percent of the population.

Ninety-three percent of the population served by community water systems in 2004 received water that met all of the health-based standards. EPA's national target for 2008 is 95 percent. Since 1996, when the first Annual Compliance Report was produced, through 2003 the results for Missouri have been consistently at or above this target, though they may vary slightly from year to year. The small dip below the 95 percent target in 2004 does not represent a reduction in water quality, but is a result of more stringent drinking water standards. For example, in January 2004 additional requirements of the Surface Water Treatment Rule went into effect, which added over 40,000 people to the population served by water systems out of compliance. The department's Water Protection Program works closely with water systems to make sure any contamination incidents are addressed quickly and that long term solutions are put in place to protect the health of Missouri's citizens.

Drinking Water Trends

The majority of MCL and monitoring violations were for failure to meet the requirements of the Total Coliform Rule. All public water systems in the state must test for this type of bacteria every month they dispense water to the public. Monitoring violations are by far the most common. The department is particularly concerned when monitoring violations occur at public water systems that have a history of bacteriological contamination. Adequate testing is the only way to know for sure if the problems have been corrected or have reoccurred.

The Public Drinking Water Program reports the following significant changes for the year 2004 in comparison to 2003.

- MCL violations for total coliform bacteria increased 2 percent from 483 to 495.
- Acute MCL violations for fecal coliform/*E. coli* increased 29 percent from 24 to 31.
- Major monitoring violations of the Total Coliform Rule decreased 12 percent from 960 to 846.

Only one percent, 30 out of the 2,700 public water systems in the state, had acute violations for fecal coliform or *E. coli* in 2004. (One of these 30 systems had 2 acute MCL violations during the year, resulting in a total of 31 acute MCLs.) While these acute violations can be serious, they are rare.

Some people, however, may be more vulnerable to water-borne illness than the general population. To educate the public on this issue, all community water systems are required to make their 2004 Consumer Confidence Report (CCR) available to customers by July 1, 2005. Each report must include the following warning:

“Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA and CDC (national Centers for Disease Control and Prevention) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.”

The CCR provides detailed information about the specific community water system, while this report does not. Much of this Annual Compliance Report contains statistics and summary information with listings of health-related and chronic monitoring violations. The majority of systems do not have violations and are therefore not listed in the ACR. The CCR provides customers with information about their own drinking water and health. It includes specifics about their water system, including the source of drinking water and the levels of naturally occurring substances in drinking water. Usually these pose no health threat and are not violations. The CCR must list violations of state and federal requirements for that year. Customers of larger water systems had an individual report mailed to them or saw the CCR published in the local newspaper. The largest systems, those serving 100,000 people or more, must post their CCRs on the Internet. Smaller water systems may have posted the CCR in their office or a public building. Approximately 90 percent of the state's community water systems are complying with the requirement to produce and distribute the CCR. Anyone can request a copy of their CCR from their public water system or by calling the department's Public Drinking Water Branch at 1-800-361-4827 or (573) 751-5331.

Compliance Activities - Preserving the Quality of the Drinking Water

The department works closely with violators to return them to compliance in a timely manner. This includes phone contacts, on-site inspections, meetings with owners or operators and technical assistance as needed. For the more serious violations, a bilateral compliance agreement (BCA) between the water system owner and the department is the tool generally used to move the system back into compliance. Essentially, BCAs are written agreements negotiated between and signed by the system owner and department staff.

If a water system violates a BCA, the department implements a negotiated settlement policy. Negotiated settlement agreements are more formal and, consequently, more legally enforceable than BCAs because the Missouri Attorney General or one of his staff review and sign these documents. If the negotiated settlement agreement is unsuccessful, the department refers the case to the Office of Attorney General for legal action through the courts. Public Drinking Water Branch staff are

serving on a committee with the Department of Health and Senior Services to identify areas in which the two agencies can support and benefit each other's activities. One of those areas is enforcement activity against facilities, such as restaurants, that are regulated by both agencies.

The department also provides training and technical assistance in an effort to prevent the occurrence of violations. Training is routinely provided to operators and owners of public water systems around the state, primarily concentrating on the basic principles of running a water system, performing the required monitoring and avoiding contamination of the system. Technical assistance in the form of phone contacts and on-site visits is also available to help water system operators avoid or correct problems. Staff in the department's five regional offices carry out most of these activities.

For all violations, public water systems are required to notify the consumers they serve. The department provides all public water systems with the necessary forms and information to effectively notify the public. The method of notification varies by the violation and system type. Systems must then report back to the department how the public notice was performed. Some violations, such as the confirmed detection of fecal coliform bacteria or *E. coli*, warrant more immediate action due to the threat to public health. For such acute violations, the department requires systems to immediately notify customers to boil water before consumption. Boil water orders remain in effect until the problem has been corrected and the water is safe to consume.

For Further Information

Information regarding the contents of this report or related data on Missouri's public water systems can be obtained by writing to the Missouri Department of Natural Resources, Public Drinking Branch, Water Protection Program, P.O. Box 176, Jefferson City, MO 65102 or calling 1-800-361-4827 or 573-751-5331. You can also visit the department's Web site at www.dnr.state.mo.us/wpscd/wpcp/dw-index.htm.

Summary of Violations Table

Definitions

The following definitions apply to the Summary of Violations table.

Filtered Systems: Water systems that have installed filtration treatment [10 CSR 60-4.055].

Inorganic Contaminants: Non-carbon-based compounds such as metals, nitrates, and asbestos. These contaminants are naturally occurring in some water, but can get into water through farming, chemical manufacturing, and other human activities. DNR has established MCLs for 15 inorganic contaminants. [10 CSR 60-4.030].

Lead and Copper Rule: This rule established national limits on lead and copper in drinking water [10CSR 60-15.010]. Lead and copper corrosion pose various health risks when ingested at any level, and can enter drinking water from household pipes and plumbing fixtures. States report violations of the Lead and Copper Rule for the following six categories:

Initial lead and copper tap M/R (Monitoring /Reporting): A violation where a system did not meet initial lead and copper testing requirements, or failed to report the results of those tests to the State.

Follow-up or routine lead and copper tap M/R (Monitoring /Reporting): A violation where a system did not meet follow-up or routine lead and copper tap testing requirements, or failed to report the results.

Treatment installation: Violations for a failure to install optimal corrosion control treatment system or source water treatment system which would reduce lead and copper levels in water at the tap. [One number is to be reported for the sum of violations in both categories].

Lead service line replacement: A violation for a system's failure to replace lead service lines on the schedule required by the regulation.

Public education: A violation where a system did not provide required public education about reducing or avoiding lead intake from water.

Maximum Contaminant Level (MCL): The highest amount of a contaminant that DNR allows in drinking water. MCLs ensure that drinking water does not pose either a short-term or long-term health risk. MCLs are defined in milligrams per liter (parts per million) unless otherwise specified.

Monitoring: DNR specifies which water testing methods the water systems must use and sets schedules for the frequency of testing. A water system that does not follow DNR's schedule or methodology is in violation [10 CSR 60-4.010].

States must report monitoring violations that are significant as determined by the EPA Administrator and in consultation with the States. For purposes of this report, significant monitoring violations are major violations and they occur when no samples are taken or no results are reported during a compliance period. A major monitoring violation for the surface water treatment rule occurs when at least 90percent of the required samples are not taken or results are not reported during the compliance period.

Organic Contaminants: Carbon-based compounds, such as industrial solvents and pesticides. These contaminants generally get into water through runoff from cropland or discharge from factories. DNR has set legal limits on 54 organic contaminants that are to be reported [10CSR 60-4.040 and 4.100].

Radionuclides: Radioactive particles, which can occur naturally in water or result from human activity. DNR has set legal limits on five types of radionuclides: radium-226, radium-228, uranium, gross alpha, and beta particle/photon radioactivity [10 CSR 60-4.060]. Violations for these contaminants are to be reported using the following four categories:

Gross alpha: A violation for alpha radiation above MCL of 15 picocuries/liter. Gross alpha includes radium-226 but excludes radon and uranium.

Combined radium-226 and radium-228: A violation for combined radiation from these two isotopes above MCL of 5 pCi/L.

Uranium: A violation for Uranium above the MCL of 30 Micrograms/liter.

Gross beta: A violation for beta particle and photon radioactivity from man-made radionuclides above 4 millirem/year.

Surface Water Treatment Rule: The Surface Water Treatment Rules (Surface Water Treatment Rule, Interim Enhanced Surface Water Treatment Rule, Long Term Enhanced Surface Water Treatment Rule) establish criteria under which water systems supplied by surface water sources, or ground water sources under the direct influence of surface water, must filter and disinfect their water [10 CSR 60-4.055]. Violations of the “Surface Water Treatment Rule” are reported for the following categories:

Monitoring, routine/repeat (for filtered systems): A violation for a system’s failure to carry out required tests, or to report the results of those tests.

Treatment techniques (for filtered systems): A violation for a system’s failure to properly treat its water.

Total Coliform Rule (TCR): The Total Coliform Rule establishes regulations for microbiological contaminants in drinking water. These contaminants can cause a short-term health problem. If no samples are collected during the one-month compliance period, a significant monitoring violation occurs. States are to report four categories of violations:

Acute MCL violation: A violation where the system found fecal coliform or E. Coli, potentially harmful bacteria, in its water, thereby violating the rule.

Non-acute MCL violation: A violation where the system found total coliform in samples of its water at a frequency or at a level that violates the rule. For systems collecting fewer than 40 samples per month, more than one positive sample for total coliform is a violation. For systems collecting 40 or more samples per month, more than 5percent of the samples positive for total coliform violation.

Major routine and follow-up monitoring: A violation where a system did not perform any monitoring. [One number is to be reported for the sum of the violations in these two categories.]

Sanitary Survey: A major monitoring violation if a system fails to collect 5 routine monthly samples if sanitary survey is not performed.

Treatment Techniques: A water disinfection process that EPA requires instead of a MCL for contaminants that laboratories cannot adequately measure. Failure to meet other operational and system requirements under the Surface Water Treatment and the Lead and Copper Rules have also been included in this category of violation for purposes of this report.

Unfiltered Systems: Missouri has required filtration of all surface water sources for many years. There are no unfiltered surface systems in Missouri and therefore no violations in this category.

Violation: A failure to meet any state or federal drinking water regulation.

Violations Table

State: Missouri
Reporting Interval: Jan. 1, 2004-Dec. 1, 2004

	MCL (mg/ℓ) ¹	MCLs		Treatment Techniques		Significant Monitoring/Reporting

Consumer Confidence Reports ³						623	328
Subtotal						623	328

¹Values are in milligrams per liter (mg/L), unless otherwise specified.

²Public notice forms were provided to systems with violations. During 2004 the department received public notice for 686 violations. The department directly performed public notice for 80 systems by listing chronic monitoring violators on statewide news releases. Some of these systems were listed multiple times. Acute MCL's were listed on our website.

³Violations for failure to produce and distribute any Consumer Confidence Report from calendar year 1998-2003. The 2004 CCR is the most recent report, due in 2005. Not comparable with Annual Compliance Report figures from prior years.

APPENDIX A-MCL Violations

I. Coliform

A. Acute

The following systems were under boil water orders due to acute MCL violations for fecal coliform or E. coli bacteria for the months listed. These acute violations also violate the standard for total coliform bacteria.

County	System Name	ID#	Month(s)	Issued	Rescind
BARRY	BOBS ONE STOP	MO5291633	November	12/03/2004	12/09/2004

*Due to two sets of invalid samples, this violation was resolved before a boil water order could be issued.

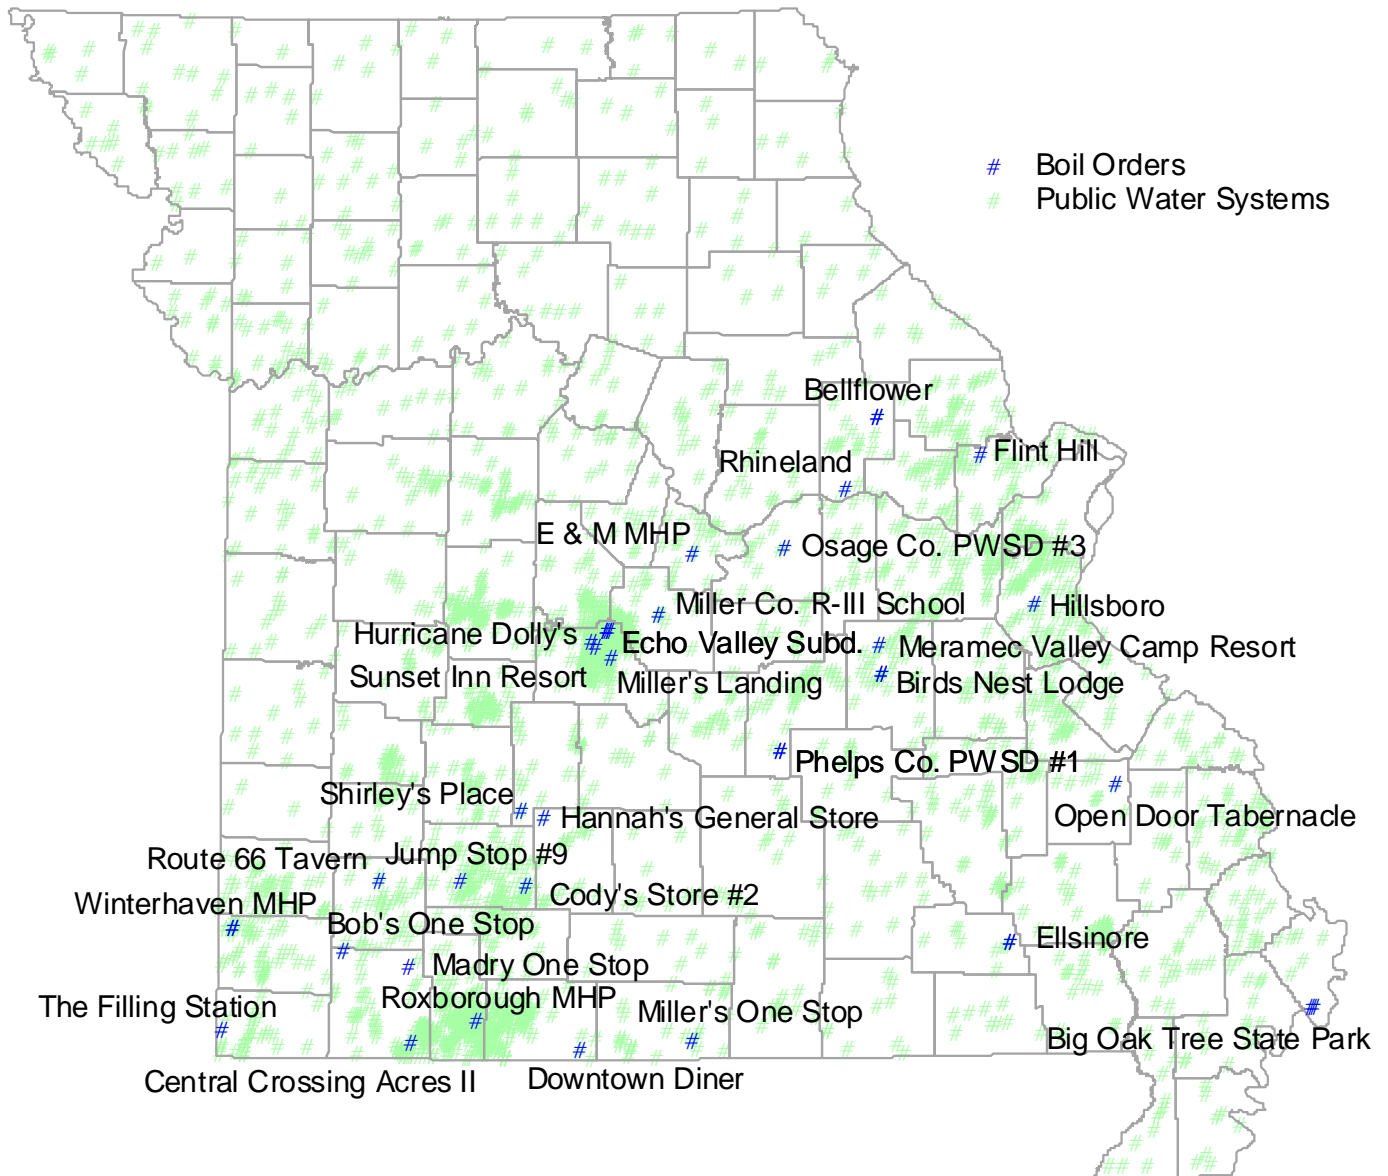

APPENDIX A-MCL Violations

I. Coliform

A. Acute

2004 Boil Water Orders

Issued due to Acute MCL Violations for Fecal Coliform/*E. coli*

For current boil water orders, check the department's web page at :
<http://www.dnr.mo.gov/wpscd/wpcp/boil/index.html>

APPENDIX A-MCL Violations

I. Coliform MCL Violations

B. Non-acute: The following systems had 2 or more samples test positive for total coliform bacteria in the months indicated. The positive samples were then tested for fecal coliform or E. coli and were found to be negative.
